MONDAY CODING TIP · SAVE THIS

5 Git commands that save you hours.

```
$ git --help-me-please
```

Swipe 👉

COMMAND 1 OF 5

```
$ git switch -
```

Jump back to the last branch

Like the TV remote's "previous channel" button. Great when you hop between a feature branch and main.

COMMAND 2 OF 5

```
$ git stash push -m "wip"
$ git stash pop
```

Park unfinished work

Urgent bug? Stash your changes, fix the bug, then bring them back.

COMMAND 3 OF 5

```
$ git commit --amend --no-edit
```

Forgot a file in the last commit?

Stage it, then add it to the previous commit. Use it only before you push.

COMMAND 4 OF 5

```
$ git log --oneline --graph --all
```

See the whole history at a glance

Every branch and merge as a neat tree, one line per commit.

COMMAND 5 OF 5

```
$ git reflog
$ git reset --hard HEAD@{1}
```

Undo almost any Git disaster

Lost a commit after a bad reset? reflog lists everywhere HEAD has been, so you can get it back.

WHICH ONE IS NEW TO YOU?

A new coding tip every Monday.
